

Dear CRI Friends

January 2009

I hope you and your families have had a good start to the year, whether on land, water or in the air! By way of new-year's gift, as it were, I am glad to inform you again of our planned CRI activities:

**Dates of the planned CRI week-ends:**

**2009: June 25-28** Lucerne, in the heart of Switzerland, organized by Arthur Huber and Peter Giger; invitations have been sent. **There are only just two weeks left to reply before the deadline on January 31, 2009! We hope there will be more applications to come.**

**Autumn 2009:** Lord Mark Saville is unfortunately unable to organize the long week-end in the South of England. Should it be possible for another UK member to jump into the breach, we would of course be very grateful! We continentals are always keen to fly to the UK!

**2010: June 10-13** D-Essen, organized by Heinz Steinforth. Heinz is already planning!

**2010: Autumn** CH-Sion, in the Canton of Valais. Ernest Eicher will be our host in Switzerland.

The grim news from the factory in Dijon must not detract from our right as Club-Robin Friends to exist! Our meetings are indeed an occasion to discuss the problems that await us as airplane owners.

**CRI Membership Subscriptions for 2009:**

As already announced in the CRI Newsletter of November 2008, the annual subscription is only **Euro 30 or CHF 50**. To save on bank fees it is best to buy a banknote in one of the aforementioned denominations at your bank, which you can then send in an envelope to the CRI address. Thank you in advance for paying **promptly!** And thanks to those of you who have already paid.

**E-mail addresses of CRI members:**

For those members who have an e-mail address, I should be grateful to receive a short e-mail ([ahuba@gmx.ch](mailto:ahuba@gmx.ch)) in order to correct my address list. Several attempts to send CRI information to members by e-mail have come back to me marked "address incorrect"!

Wishing all CRI pilots many happy landings in 2009, your leader crew

**Arthur Huber and Pius Wigger**
